

#8.53

$W=200\text{ mm}$, $h=400\text{ mm}$.
 $d=300\text{ mm}$.

two parts welded together
called ① & ②

$$[I^O] = [I^O]_1 + [I^O]_2$$

from parallel-axis theorem.

$$\text{we get } [I^O]_1 = [I^O]_1 + m_1 \begin{bmatrix} y_c^2 + z_c^2 & -x_c y_c & -x_c z_c \\ -x_c y_c & x_c^2 + z_c^2 & -y_c z_c \\ -x_c z_c & -y_c z_c & x_c^2 + y_c^2 \end{bmatrix}$$

since it's a uniform plate.

$$\therefore m_1 = \frac{m}{h+2h}$$

$$\therefore [I^O]_1 = \frac{mh}{12(h+d)} \begin{bmatrix} h^2 & 0 & 0 \\ 0 & wh^2 & 0 \\ 0 & 0 & wh^2 \end{bmatrix} + \frac{mh}{h+d} \begin{bmatrix} \frac{h^2}{4} & 0 & 0 \\ 0 & \frac{h^2}{4} & 0 \\ 0 & 0 & \frac{h^2}{4} \end{bmatrix}$$

Use the table at back

$$= \frac{mh}{h+d} \begin{bmatrix} \frac{3h^2}{4} & 0 & 0 \\ 0 & \frac{h^2}{3} + \frac{h^2}{4} & 0 \\ 0 & 0 & \frac{h^2}{3} \end{bmatrix}$$

$$\text{Similarly, } [I^O]_2 = [I^O]_2 + m_2 \begin{bmatrix} h_c^2 + z_c^2 & -x_c y_c & -x_c z_c \\ -x_c y_c & x_c^2 + z_c^2 & -y_c z_c \\ -x_c z_c & -y_c z_c & x_c^2 + y_c^2 \end{bmatrix}$$

$$= \frac{md}{12(h+d)} \begin{bmatrix} d^2 & 0 & 0 \\ 0 & wd^2 & 0 \\ 0 & 0 & wd^2 \end{bmatrix} + \frac{md}{h+d} \begin{bmatrix} \frac{d^2}{4} + h^2 & 0 & 0 \\ 0 & h^2 & 0 \\ 0 & 0 & h^2 \end{bmatrix}$$

$$= \frac{md}{h+d} \begin{bmatrix} \frac{3d^2}{4} + h^2 & 0 & 0 \\ 0 & \frac{d^2}{3} + h^2 & 0 \\ 0 & 0 & \frac{d^2}{3} + h^2 \end{bmatrix}$$

$$\therefore [I^O] = \frac{m}{h+d} \begin{bmatrix} \frac{3d^2}{4} + h^2 + \frac{3d^2}{4} + h^2 & 0 & 0 \\ 0 & \frac{d^2}{3} + \frac{d^2}{3} + h^2 + h^2 & 0 \\ 0 & 0 & \frac{d^2}{3} + \frac{d^2}{3} + h^2 + h^2 \end{bmatrix}$$

Find angle between $\vec{\omega} = 3\text{ rad/s } \hat{k}$ & $\vec{H} = [I^O] \vec{\omega}$

$$[I^O] = \begin{bmatrix} 20 & 0 & 0 \\ 0 & 20 & 0 \\ 0 & 0 & 40 \end{bmatrix} \text{ kg m}^2$$

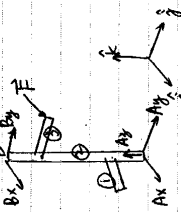

$$\therefore \vec{H} = \begin{bmatrix} 20 & 0 & 0 \\ 0 & 20 & 0 \\ 0 & 0 & 40 \end{bmatrix} \begin{bmatrix} 0 \\ 0 \\ 3 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 120 \end{bmatrix} \text{ kg m}^2/\text{s}$$

$\therefore \vec{H}$ is parallel to $\vec{\omega}$
ie. angle is 0.

8.63

neglect gravity.

FBD

$$\Sigma \vec{M}_A = \vec{\omega} \times \vec{H}_A + [I_A] \dot{\vec{\omega}}$$

At the beginning $\dot{\vec{\omega}} = 0$. $\therefore \Sigma \vec{M}_A = [I_A] \dot{\vec{\omega}}$

$$[I_A] \dot{\vec{\omega}} = \begin{bmatrix} \frac{1}{12} ml^2 & 0 & -\frac{1}{8} mld \\ 0 & \frac{ml^2}{16} + \frac{mld^2}{3} & 0 \\ -\frac{1}{8} mld & 0 & \frac{1}{3} mld^2 \end{bmatrix}$$

$$[I_A] \dot{\vec{\omega}} = \begin{bmatrix} \frac{1}{12} ml^2 & 0 & 0 \\ 0 & \frac{1}{3} mld^2 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

$$[I_A] \dot{\vec{\omega}} = \begin{bmatrix} \frac{1}{12} ml^2 + \frac{1}{3} mld^2 & 0 & 0 \\ 0 & \frac{1}{3} mld^2 & -\frac{1}{8} mld \\ 0 & -\frac{1}{8} mld & \frac{1}{3} mld^2 \end{bmatrix}$$

$$\therefore [I_A] \dot{\vec{\omega}} = \begin{bmatrix} \frac{1}{12} ml^2 + \frac{1}{3} mld^2 & 0 & 0 \\ 0 & \frac{1}{3} mld^2 + \frac{1}{3} mld^2 & -\frac{1}{8} mld \\ -\frac{1}{8} mld & -\frac{1}{8} mld & \frac{1}{3} mld^2 \end{bmatrix}$$

$$\therefore [I_A] \dot{\vec{\omega}} = [I_A] \begin{bmatrix} 0 \\ 0 \\ \alpha \end{bmatrix} = -\frac{1}{8} mld \alpha \hat{i} - \frac{1}{8} mld \alpha \hat{j} + \frac{1}{3} mld^2 \alpha \hat{k}$$

$$\Sigma \vec{M}_A = \vec{r} \times \vec{F} + \vec{A} \times \vec{B} + \vec{A} \times \vec{C}$$

$$= (d\hat{j} + \frac{1}{2}l\hat{k}) \times (-F\hat{i} + G\hat{k}) + l\hat{k} \times B\hat{i} + l\hat{k} \times B\hat{j}$$

$$= Fd\hat{k} - \frac{1}{2}Fl\hat{j} + Gd\hat{i} + Bld\hat{j} - Bld\hat{i}$$

$$\therefore \hat{i} \cdot \hat{i} \Rightarrow \frac{1}{3} mld^2 \alpha = Fd$$

$$\text{And } \hat{i} \cdot \hat{j} \Rightarrow Bld - \frac{1}{2}Fl = -\frac{1}{8}mld\alpha = -\frac{1}{8}Fl$$

$$\therefore Bx = \frac{1}{16}Fl$$

$$\hat{j} \cdot \hat{j} \Rightarrow Gd - Bld = -\frac{1}{8}mld\alpha = -\frac{1}{8}Fl$$

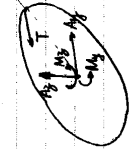

$$\therefore By = \frac{1}{16}Fl + \frac{1}{16}Fl$$

8.81

massless wire perpendicular to the shaft.

FBD:

Consider the x'y'z' coordinate system

$$\hat{i}' = \hat{i}, \quad \hat{j}' = \cos\phi \hat{j} + \sin\phi \hat{k}, \quad \hat{k}' = -\sin\phi \hat{j} + \cos\phi \hat{k}$$

$$\text{And } [I_O]_{y'y'z'} = \begin{bmatrix} \frac{1}{12} mR^2 & 0 & 0 \\ 0 & \frac{1}{12} mR^2 & 0 \\ 0 & 0 & \frac{1}{12} mR^2 \end{bmatrix}$$

since $\dot{\omega}$ is a constant,

$$\therefore \vec{H}_O = \vec{\omega} \times \vec{H}_O, \quad \vec{H}_O = [I_O]_{y'y'z'} \cdot \vec{\omega}_{y'y'z'}$$

$$\vec{\omega}_{y'y'z'} = \omega \hat{k}' = \omega \sin\phi \hat{j}' + \omega \cos\phi \hat{k}'$$

$$\therefore \vec{H}_O = \begin{bmatrix} \frac{1}{12} mR^2 & 0 & 0 \\ 0 & \frac{1}{12} mR^2 & 0 \\ 0 & 0 & \frac{1}{12} mR^2 \end{bmatrix} \begin{bmatrix} 0 \\ \omega \sin\phi \\ \omega \cos\phi \end{bmatrix} = \begin{bmatrix} 0 \\ \frac{1}{12} mR^2 \omega \sin\phi \\ \frac{1}{12} mR^2 \omega \cos\phi \end{bmatrix}$$

$$\therefore \vec{H}_O = (\omega \sin\phi \hat{j}' + \omega \cos\phi \hat{k}') \times (\frac{1}{12} mR^2 \omega \sin\phi \hat{j}' + \frac{1}{12} mR^2 \omega \cos\phi \hat{k}')$$

$$= \frac{1}{12} mR^2 \omega^2 \sin\phi \cos\phi \hat{i}' - \frac{1}{12} mR^2 \omega^2 \sin\phi \cos\phi \hat{i}'$$

$$= \frac{1}{12} mR^2 \omega^2 \sin\phi \cos\phi \hat{i}'$$

$$= \frac{1}{12} mR^2 \omega^2 \sin\phi \cos\phi \hat{i}'$$

$$\text{And } \Sigma \vec{M}_O = \vec{r} \times \vec{T} + M_y \hat{j} + M_z \hat{k}$$

$$= R \hat{j} \times (-T \cos\phi \hat{j}' + T \sin\phi \hat{k}') + M_y \hat{j} + M_z \hat{k}$$

$$= TR \sin\phi \hat{i}' + M_y \hat{j} + M_z \hat{k}$$

$$= TR \sin\phi \hat{i}' + M_y \hat{j} + M_z \hat{k}$$

$$\{ \} \cdot \hat{i} : TR \sin \phi = \frac{1}{4} m R^2 \omega^2 \sin \phi \cos \phi$$

$$\therefore T = \frac{1}{4} m R \omega^2 \cos \phi$$

8.92

$\vec{\omega}$ is a constant. $\therefore \vec{H}_0 = \vec{\omega} \times \vec{H}_0$

$\therefore$ When $\vec{H} = 0$, $\vec{H}_0 = [\mathbf{I}^0] \vec{\omega}$ must be parallel to the angular velocity $\vec{\omega}$. i.e. $\vec{\omega}$ is the eigenvector of $[\mathbf{I}^0]$. Also the center of mass must lie on the axis of rotation.

a) Yes.

$\vec{\omega}$ is parallel to $\vec{H}_0$. $\therefore \vec{H}_0 = 0$. $[\mathbf{I}^0] = \frac{m}{12} \begin{bmatrix} a^2 + b^2 & 0 & 0 \\ 0 & a^2 & 0 \\ 0 & 0 & b^2 \end{bmatrix}$

b) Yes.

$\vec{H}_0 = 0$. ($\vec{\omega} \parallel \vec{H}_0$)

c) No.

mass center isn't on the rotation axis. $\vec{H}_0 \neq 0$

d) Yes.

$$[\mathbf{I}^0] = \begin{bmatrix} xx & xx & 0 \\ xx & xx & 0 \\ 0 & 0 & xx \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} 0 \\ 0 \\ \omega \end{bmatrix} \quad \therefore \vec{H}_0 = \begin{bmatrix} 0 \\ 0 \\ xx \end{bmatrix} \parallel \vec{\omega}$$

e) Yes.

$$[\mathbf{I}^0] = \begin{bmatrix} xx & 0 & 0 \\ 0 & xx & 0 \\ 0 & 0 & xx \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} 0 \\ 0 \\ \omega \end{bmatrix} \quad \therefore \vec{H}_0 = \begin{bmatrix} 0 \\ 0 \\ xx \end{bmatrix} \parallel \vec{\omega}$$

f) Yes.

$$[\mathbf{I}^0] = \frac{2}{5} m R^2 \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} 0 \\ 0 \\ \omega \end{bmatrix} \quad \vec{H}_0 \parallel \vec{\omega}$$

g) Yes.

$$[\mathbf{I}^0] = \frac{1}{6} m \begin{bmatrix} a^2 & 0 & 0 \\ 0 & a^2 & 0 \\ 0 & 0 & a^2 \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} \alpha \\ \beta \\ \gamma \end{bmatrix} \quad \vec{H}_0 = \frac{m a^2}{6} \begin{bmatrix} \alpha \\ \beta \\ \gamma \end{bmatrix} \parallel \vec{\omega}$$

(in principal axis coordinates)

h) No.

$$[\mathbf{I}^0] = \begin{bmatrix} 2md^2 & 2mdR & 0 \\ 0 & 2md^2 + 2mR^2 & 0 \\ 2mdR & 0 & 2mR^2 \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} 0 \\ 0 \\ \omega \end{bmatrix}$$

$$\vec{H}_0 = 2m\omega \begin{bmatrix} dR \\ 0 \\ R^2 \end{bmatrix} \nparallel \vec{\omega}$$

c) Yes.

Consider the principal

in $x'y'z'$ coordinate system.

$$[\mathbf{I}^0] = \begin{bmatrix} \frac{3}{2} m R^2 & 0 & 0 \\ 0 & 3 m R^2 & 0 \\ 0 & 0 & \frac{3}{2} m R^2 \end{bmatrix} \quad \vec{\omega} = \begin{bmatrix} -\omega \sin \alpha \\ 0 \\ \omega \cos \alpha \end{bmatrix}$$

$$\vec{H}_0 = \frac{3}{2} m R^2 \omega \begin{bmatrix} -\sin \alpha \\ 0 \\ \cos \alpha \end{bmatrix} \parallel \vec{\omega}$$

i) Yes.

Since rotation axis is perpendicular to the two eigenvectors of $[\mathbf{I}^0]$, it must be parallel to the third eigenvector of $[\mathbf{I}^0]$, which means

$$\vec{H}_0 \parallel \vec{\omega} \quad \therefore \vec{\omega} \times \vec{H} = 0 \quad \vec{H} = 0$$
